Mindbase stores all data on a neuron-synapse-neuron format, and it sorts and stores all data elements in a manner similar to the human mind's method of sorting and storing words. It stores both active and passive voice sentence structures. Mindbase features: ends heterogeneous database problems, simulates creative thinking, it is 100% graphical, it eliminates the need for data warehouses and ERP software, it is useable on the Internet and it is a universal development platform that can accomplish numerous functions such as Database Structuring, Decision Support Systems, Computer Assisted Design, Data Mining, Software Engineering and Internet applications such as -- B2B, B2C, CRM, Supply Chain, etc.
